

TEMPORARY CROWN POST OPERATIVE INSTRUCTIONS

- Brushing and Flossing... you are able to brush everywhere like normal, just be gentle brushing the temporary crown itself. Please do not floss around the crown to avoid it coming off.
- Eating... please stay away from any hard or sticky foods while in a temporary crown.
- Expect... soreness and sensitivity of the tooth or around the area is to be expected. This sensation can last days up to months, but will go away over time.
- If the bite feels off... please call and let us know if you feel that you are biting high on the temporary crown. We don't want the crown to be present in your bite to avoid the temporary from cracking or falling off.
- If the temporary falls off... you can re-cement it with toothpaste for the time being and give us a call so we can properly re-cement it for you.
